## Recreational Trails

**Minimizing impacts to the environment while allowing for greatest access of the land.**

At Haley Ward, we have proven that with thoughtful trail design, we open the outdoors to enhance access. We successfully develop sites that balance the natural environment with trails for people to walk, bike, ski, or snowshoe. Our designs have been recognized for engineering excellence because of our considerations to minimize impacts to the environment while providing access to land for a number of recreational opportunities.

When hiring our team, we bring our experience and understanding of the various requirements involved from project financing, environmental concerns, community input, regulations, and permitting at the local, state, and federal levels. As with any project we undertake, our goal is to complete the project to meet your needs, on-time and on-budget.

Our innovative, effective solutions are successful in part due to the relationships we build and maintain over years of working within the recreational community. With our broad base of professional services and experience, we are able to meet challenges that may arise on a project.
