Transportation Planning / Traffic Engineering

There are very few areas of the development process that are not influenced by transportation planning and sound traffic engineering. The choices a project development makes about transportation have implications on safety, efficiency, and design on a project scale (micro) and a larger scale (macro).

The choices an engineer/planner makes are influenced by the geographical layout of existing roads and walkway networks, adjacent land uses, applicable rules and regulations, and social considerations. Traffic Engineering and Transportation Planning combines the principals of engineering and planning with an understanding of social behavior and the habits of transportation systems.

At Haley Ward we offer expert consulting services for all aspects of Traffic Engineering and Transportation Planning. Our staff has the ability to consider the overall vision of the project (planned uses, density, etc.) in the context of the surrounding land uses and transportation networks to offer concrete solutions aimed at maintaining the safe and efficient interaction between motorists, pedestrians, and other modes of transportation.

Your transportation and traffic projects require solutions that consider the implications of safety, efficiency, and scale while also acknowledging the influences of the geographical layout of existing roads, walkways, adjacent land uses, regulations, and social considerations. Traffic engineering and transportation planning combine the principals of engineering and planning with an understanding of social behavior and transportation systems. Our staff exercises this knowledge by offering concrete solutions that successfully maintain safe and efficient interaction between motorists, pedestrians, and other modes of transportation.

The following is a list of the traffic and transportation services Haley Ward provides.

- MDOT Traffic Movement Permits
- Road Safety Audits
- Access Management
- Road and Infrastructure Signage
- Traffic Control Plans
- Traffic Impact and Management Studies
- Corridor Studies
- Parking Studies
- Pedestrian Studies
- Peer Review
- Traffic Calming
- Site Distance Evaluations
- Recreational Trails
- Site Circulation Studies
- State and Municipal Permit Applications

REPRESENTATIVE CLIENTS

- Variety of Contractors and Private Developers
- Town of Glenburn
- Vision Project Services
- Consolidated Communications
- Charter Communications
- Town of Milford
- Municipal Review Committee
- Town of Mount Desert
