

HALEY WARD

ENGINEERING | ENVIRONMENTAL | SURVEYING

Building Services **In-House**

We are pleased to share that Haley Ward, an engineering, environmental science, and surveying consulting firm has recently added to our engineering team to better serve the needs of architects for building construction and renovation projects.

Our expert staff members provide structural, mechanical and electrical design services and a comprehensive approach to repairing, renovating, or expanding an existing structure or constructing a new one. We work together to provide consistent successful outcomes for our professional clients. From foundations to complex structures, our knowledge of materials and their application for every environment allow us to design clients long-term solutions.

STRUCTURAL

Our expertise in structural design includes all aspects of building construction such as: foundations and buildings in steel, concrete, precast/prestressed concrete and timber.

MECHANICAL

We have expanded our mechanical engineering services team by adding depth and decades of experience to the application and design of HVAC and plumbing systems for buildings of all types.

ELECTRICAL

Complementing our mechanical expertise, we are now able to provide electrical engineering design services including facility assessments and more to assist clients.

OTHER SERVICES

In addition to our services specifically related to building, we offer a full suite of civil engineering, architectural and environmental services for your development needs.
